

## BreakThrough

BreakThrough is an exciting new software engineering service for inkjet press vendors from Global Graphics Software.

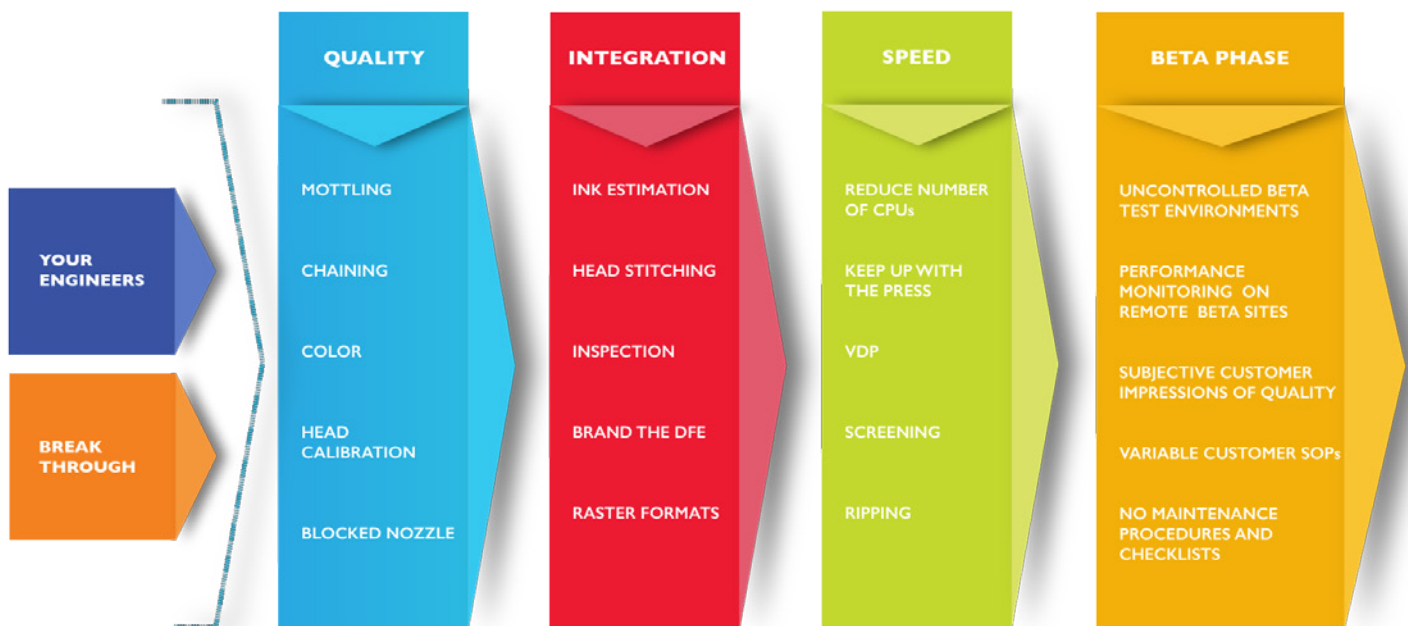

We understand the challenges that you are facing. Challenges that you can't foresee because inkjet technology is evolving so quickly.

Then there are the internal constraints to consider such as working within budget to keep the bill of materials down, your in-house resources, or the speed and quality requirements you need to reach for your specific applications.

BreakThrough is a service offered by expert software and integration engineers that you can use to boost your internal capability. Many of the press vendors already working with the Global Graphics' BreakThrough team are at the cutting edge of the digital inkjet technology.

### BREAK THROUGH YOUR TECHNICAL PROBLEMS!

Our BreakThrough team likes nothing more than tackling customer challenges. Whatever your problem is they will work side by side with you to break through it.

## GET THERE FIRST!

The race to market puts huge pressures on development teams. You will come across barriers that will take too long to overcome by yourself and the danger is that you will stall, or be beaten to market by your competitors.

What you need is some time from a team of top experts who are absolutely motivated and have the depth of experience to break down those barriers and get you moving again. Resources that can work with you on site, understanding your specific issue and technologies.

## GET THE RIGHT HELP WHEN YOU NEED IT MOST

These crucial resources are not something you can hire from the general contracting or employment market. They are often locked away in the top technology vendors and are key to a specific product deliverable. So how do you get help from the people you need when you need them?

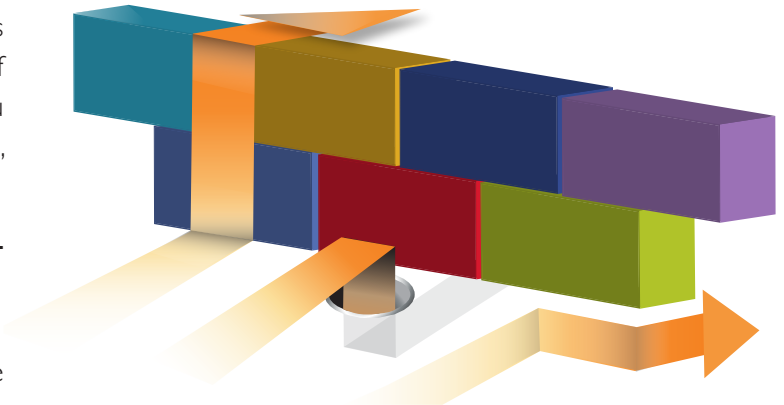

## FIRST RATE ENGINEERING AND EXPERIENCE

Global Graphics has almost 30 years' experience in the printing industry with 15 chalked up in digital technology. Today our software drives the highest quality digital presses on the market and the fastest.

Our specialists are in a class of their own working in areas like Screening, Color Science, Embedded Engineering, Communication Protocols, PDF, PostScript® and Fonts. We are actively involved in a number of industry bodies and our CTO is the primary UK expert on the ISO committees working on PDF/X, PDF and PDF/VT. Having this rich depth of experience is why our RIPs and software technologies are considered the best in the printing industry.

## BUY A BLOCK OF TIME

Our model is that we supply a block of time and you can ask us to tackle whatever issue you need us to. We might start at one point and end up at another. You can also bank the time and use it for a future project. It's up to you, we are here to help you.
